Status	v1.0
Last updated	2026-05-31
Audience	Anyone presenting / pitching / explaining Hawkeye

💡 **What these are.** Five hand-crafted SVG diagrams that get used across decks, docs, and presentations. AWS-architecture-poster style — layered, annotated, code-traced. Each one is the canonical visual for its concept and should be reused (not redrawn in Mermaid each time).

The Five

#	FILE	USE IT FOR	USED IN
1	01-platform-architecture.svg	The 3-layer engine (Config + 5 pillars + AI Gateway)	HAWKEYE-STORY · PLATFORM-EXECUTIVE · VISION · Investor deck · CTO deck
2	02-audit-lifecycle.svg	Audit Management 8-phase swim-lane	Audit STORYBOOK · QA Head deck · Demo materials
3	03-askhawk-3-phase.svg	AskHawk Regulations + SOPs + Wizard	AskHawk STORYBOOK · Investor deck · CTO deck
4	04-chain-of-evidence.svg	Cross-module record flow (FDA-483 traversing 7 modules)	HAWKEYE-STORY · Regulator collateral · CTO deck
5	05-market-positioning.svg	Competitive quadrant	VISION · MARKET-ANALYSIS · Investor deck

How to embed

In any markdown doc rendered through `Doc_V2/_scripts/render-docs.mjs`, reference like this:

```
![[Platform Architecture](../_assets/hero-svgs/01-platform-architecture.svg)]
```

The renderer inlines the SVG content directly (no `<img>` tag in the rendered HTML), so:

- PDFs render with the SVG baked in (no external dependency)
- Standalone HTML works offline

- Browser viewing scales the SVG natively

Design principles followed

1. **Layered + grouped** — config layer / pipeline / AI gateway each have their own band
2. **Numbered callouts** — pillar numbers in solid circles, top-left of each card
3. **Code-traced** — every box has the actual file name from the codebase
4. **Honest** — gates labeled, gaps marked, governance guarantees explicit
5. **Print-safe** — A4-friendly proportions, readable at 100% zoom on 720p displays

Edit / re-render

These are hand-crafted SVG (raw XML). To edit:

- Open the `.svg` in VS Code (text edit) OR Inkscape / Figma (visual edit)
- Re-save in place
- No re-generation step needed — markdown re-render picks up the new file

If you create a 6th hero diagram, add it to this index and link from wherever it's used.
