CONTENTS

- 1. QM-001 v3 · Sections 1, 2, 4 (Pre-audit shareable extract)
- 2. 1. Quality Policy
- 3. 2. Scope of Quality Management System
- 4. 4. Pharmaceutical Quality System Elements (ICH Q10)
 - 1. 4.1 Process Performance and Product Quality Monitoring System
 - 2. 4.2 Corrective and Preventive Action System
 - 3. 4.3 Change Management System
 - 4. 4.4 Management Review of Process Performance and Product Quality
 - 5. 4.5 Knowledge Management
 - 6. 4.6 Quality Risk Management (ICH Q9)
- 5. Note on this excerpt

QM-001 v3 · Sections 1, 2, 4 (Pre-audit shareable extract)

FIELD	VALUE
Document	Sai Life Sciences Quality Manual
Document Number	QM-001
Version	3
Effective Date	2025-09-01
Owner	Head of Quality Assurance
Approver	Chief Operating Officer · Head of Quality
Distribution	Controlled · For audit-evidence sharing only

1. Quality Policy

Sai Life Sciences Pvt. Ltd. is committed to delivering Active Pharmaceutical Ingredients and Intermediates of consistent quality, in compliance with applicable regulatory requirements (US FDA cGMP, EU GMP Part II, ICH Q7, Schedule M India, WHO PQ), under a Pharmaceutical Quality System aligned with ICH Q10.

Our policy commitments:

- 1. Patient safety first in every quality decision
- 2. Data integrity by design — ALCOA+ enforced at system level
- 3. Continuous improvement through risk-based investigation and CAPA closure
- 4. Compliance with regulator expectations in all markets we serve
- 5. People-first — competence built through training, succession, and culture

2. Scope of Quality Management System

Applies to:

- API and intermediate manufacturing across Hyderabad and Bidar sites
- Quality Control laboratories (chemical and microbiology)
- Warehouse operations (raw materials, intermediates, APIs)
- Contract giver activities for outsourced testing and packaging

Excludes:

- Clinical Research operations (governed by separate CRO QMS)
- Discovery research (governed by R&D QMS)

4. Pharmaceutical Quality System Elements (ICH Q10)

4.1 Process Performance and Product Quality Monitoring System

Continuous monitoring of CPP (Critical Process Parameters) and CQA (Critical Quality Attributes) via in-process controls and trend reviews. Periodic Product Quality Review per product per year.

4.2 Corrective and Preventive Action System

All deviations, complaints, OOS results, and audit findings flow to CAPA. CAPA closure requires effectiveness verification. Recurring root cause triggers extended investigation.

4.3 Change Management System

All changes affecting product quality, process, equipment, or controlled documents are routed through Change Control. Risk-based categorisation determines approval level and notification obligations to customers and regulators.

4.4 Management Review of Process Performance and Product Quality

Quarterly Management Review meeting. Inputs:

- KPI scorecard (deviation rate, CAPA cycle time, complaint rate, batch failure rate)
- Audit findings (internal, customer, regulator)
- Training compliance
- Resource adequacy

Outputs: documented decisions and action items tracked to closure.

4.5 Knowledge Management

Process and product knowledge captured in:

- Master Batch Records (current revision controlled)
- Development reports
- Risk assessment files (ICH Q9)
- Tech transfer dossiers

4.6 Quality Risk Management (ICH Q9)

Risk-based approach to:

- Equipment and computerized system validation
 - Supplier qualification
 - Change control impact assessment
 - Deviation classification
-

Note on this excerpt

This is a controlled extract of QM-001 v3 sections shared with audit partners. Full Quality Manual contains additional sections (3 – Quality Organisation; 5 – Documents and Records; 6 – Personnel; 7 – Premises and Equipment; 8 – Production; 9 – QC; 10 – Materials Management; 11 – Validation; 12 – Complaints and Recalls; 13 – Self-Inspection; 14 – Distribution) — available under NDA on request.
